FIB-SOL INNOVATION

FIB-SOL provides super-efficient delivery system for bio-fertilisers, which are soil microbes. The innovative encapsulation technology enables delivery of soil bacteria in a highly compact (1000X) and effective way.

FIB-SOL formulation increases availability of macronutrients to the plant. As a result, the nutrient absorption increases, which leads to more yield, healthier crops and better quality of the produce.

ABOUT US

FIB-SOL, a spin off from IIT Madras, was founded by a versatile group of scientists specialising in various fields such as Biotechnology, Nanotechnology and Polymer Chemistry. The passion for bringing cutting edge science into agriculture is the key driving force behind FIB-SOL. Sales and Marketing activities at FIB-SOL are led by personnel with rich experience in Agri-input industry.

MISSION

To harness advanced technologies in the field of Biotechnology and nanotechnology for entrapment of agriculturally important microbes and their metabolites in light-weight and water-soluble formulations.

VISION

To redefine global Agri-inputs so as to achieve better yields and improve farmer profitability and soil quality in an eco-friendlier way.

FIB-SOL, NUTRIENT ABSORPTION AND CROP YIELD

Soil quality decreases because of various factors, including excessive use of chemical fertilisers. Further, the decrease in nutrient absorption by the crops makes it necessary to use organic inputs and soil microbes. Using FIB-SOL helps restore soil quality and increases nutrient absorption from the soil.

FIB-SOL ADVANTAGES

- Can increase nutrient availability of both Chemical and Organic inputs
- Provides macronutrients and enzymes
- Easy logistics : can be supplied by postal service
- Less overlay cost
- Water soluble: easy to apply

FIB-SOL BENEFITS

- Increase yield by 20-30%
- Better grain quality and nutrition
- Improves soil quality and texture
- Healthier and immune plants
- Restore soil with natural microbial flora

FIB-SOL KEY FEATURES

- Instant remedy for poor quality soil with high cell count, 10^{11} cfu/ml (1000 times more than conventional)
- Lightweight (100 ml for an acre)
- Water soluble and eco-friendly

PRODUCT RANGE

TAILOR-MADE FORMULATIONS FOR A VARIETY OF APPLICATIONS

FIB-SOL products are available as gel and fibre, and include special formulations to suit different crops, based on their nutrient requirements and soil type.

Agrigels | NPK Combo | Crop Specific Formulations
NPK Combo for Urban Kitchen Gardens |
Immune Boosters | NOCA Certified
| Fertiliser Carrying Membranes

METHOD OF APPLICATION

Mix the contents of the sachets in 200L of water.

Drip irrigate or spray on soil over one acre of land.

Mix contents in soil or compost (5Kg)

Broadcast directly

Apply two doses for three-month crops.

PRODUCT CATALOGUE

GREENING FIELDS, EMPOWERING YIELDS WITH SUSTAINABLE TECHNOLOGY

World's First Gel Based Biofertilizer

IIT Chennai Research Park & ICAR Pusa Krishi,
New Delhi Incubated Product (3×10^{11} C.F.U/ml)

PRODUCT FEATURES

Soil Application

MICROBIAL COUNT: 3×10^{11} C.F.U PER ML OF NPK BACTERIA

- Nitrogen Fixing Bacteria - Azospirillum,
- Phosphorus Solubilising Bacteria - Bacillus sp.
- Potash Mobilising Bacteria - Bacillus sp.

Advantages:

1. Improves plant vegetative growth
2. Improves plant immunity and yield
3. Helps to reduce environmental stress

Benefits:

- Eco friendly
- Easy to use
- Reduces chemical fertilizers

Dosage: 1 Packet (100 m.l) per acre application.

Mode of Application:

Seed coating & Soil application - Drip Irrigation, Soil drenching with sand or compost.

Soil Application

MICROBIAL COUNT: 3×10^{11} C.F.U PER ML OF NPK BACTERIA

- Nitrogen Fixing Bacteria - Azospirillum,
- Phosphorus Solubilising Bacteria - Bacillus sp.
- Potash Mobilising Bacteria - Bacillus sp.

Advantages

1. Controls flower and fruit drop
2. Improves size and quality of fruit/flowers
3. Increases yield upto 25%

Benefits:

- Eco friendly
- Easy to use
- Reduces chemical fertilizers

Dosage: 1 Packet (100 m.l) per acre application.

Suitable for all types of crops

Mode of Application:

Soil application - Drip Irrigation, Soil drenching with sand or compost & Water drenching

PRODUCT FEATURES

Nutrigel+ (Foliar Spray)

All essential amino acids and Nano-Micronutrients along with Organic Carbon and Nitrogen in a single water-dispersible gel-based formulation.

Advantages

1. Improves fruiting & flowering
2. Improves fruit size
3. Improves fruit color & quality

Benefits:

1. Uniform disbursal
2. Easy absorption
3. Easy to apply

Dosage: 1pack of Nutrigel +(100ml)sufficient for an acre.

Application :

Foliar spray: Dissolve 100ml of Nutrigel+ in 100 to 200 liters of water based on crop foliage and mix the contents thoroughly before spraying.

PRODUCT FEATURES

Soil Application

MICROBIAL COUNT:

>10¹⁰ CELLS/ ML OF TRICHODERMA VIRIDAE.

A natural fungicide that is effective in controlling soil and seed-borne pathogens by its antagonistic effect.

Advantages

- 1 Flight against bacterial, fungal and viral infestations of the plants
2. Improve nutrient absorptions
3. Improves plant immunity

Benefits

Easy application Potent Formula Reduces usage of fungicides
Dosage : 1 Packet (100 m.l) per acre application.

Application: Seed coating, Soil application & Drip Irrigation Mix 100 m.l of this tri-gel into 5 litres of water and later dilute this solution to 200 litres of water and apply it through a drip irrigation system to 1 acre of the plot.

Soil Application

MICROBIAL COUNT:

>10¹⁰ CELLS/ ML OF PSEUDOMONAS SP.

Prevent soil-borne diseases by surpassing soil-borne pathogens

Advantages

- 1 Flight against bacterial, fungal and viral infestations of the plants
2. Improve nutrient absorptions
3. Improves plant immunity

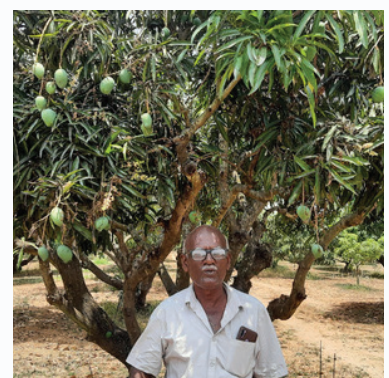

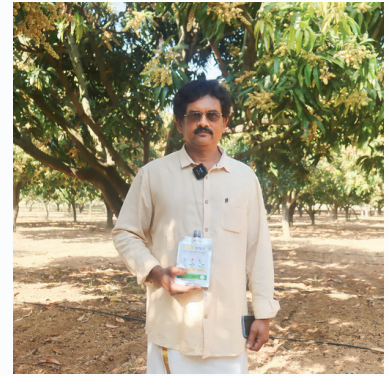

Benefits

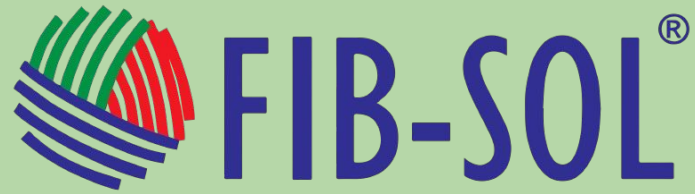

Easy application Potent Formula Reduces usage of fungicides
Dosage : 1 Packet (100 m.l) per acre application.

Application: Seed coating, Soil application & Drip Irrigation Mix 100 m.l of this tri-gel into 5 litres of water and later dilute this solution to 200 litres of water and apply it through a drip irrigation system to 1 acre of the plot.

OUR HAPPY FARMERS

Join us in our journey to improve agriculture! Through comprehensive range of products and free technical consultations allow you to experience the benefits of sustainable technology firsthand. We believe that by working together, we can create a brighter future for farmers, agriculture, and our planet.

PRODUCTS & SERVICES

Your Ultimate Bio-input Manufacturer

Quickly Add Microbials To Portfolio

@Zero R&D Costs

Diversify your Product Portfolio
without R&D Costs and Efforts

Manage Geopolitical Uncertainties
and Supply Chain Shocks Without
Sacrificing Revenues

Claim Premium Margins and Boost
Bottomline

Participate in Integrated
Nutrient/Pest Management
Practices

Patented Formulation Technology

IG4 Technology
(Indian Patent No.: 421141)

FIB-SOL's novel gel-based formulations have:

- Industry-leading microbe payload capacity(10^{11} CFU/ml)
 - Zero contamination
 - 18 months stability
 - 10x Smaller Logistics Footprint
 - 100% water solubility
-

Reduce Chemical Intensity

Transition to Sustainable
Products Portfolio

Bundle with your Plant
Nutrition(Chemical) SKUs

Enhance Nutrient Uptake & Nutrient
Use Efficiency of Plants

Maintain or Boost Yield:
FIB-SOL product treatments
resulted in nominal yield increase
with just 75% of Recommended
Fertilizer Dosage in multiple crops

Proven Performance & Outcomes

6,00,000 acres since 2020

Reliable Outcomes

10-25% yield boost across key crops

FIB-SOL's products has cumulatively reached 6 lakh acres

FY 2025-26: 1.85 Lakh units sold

Reduce Logistics Overhead

10X Lesser Volume

10X lesser volume & weight

100ml SKU equivalent to 1 litre
competitor products(Liquid
Biofertilizers/Biocontrols)

5X lesser shelf/storage-space
required

Avoid Return Risks

Multi-season Stability

FIB-SOL's microbial encapsulation method keeps microbes dormant and viable for nearly 24 months

Proven stability even at higher temperature storage environments

Claim 18 months shelf-life for your SKUs spanning 3 crop seasons

Easy Integration With Practice

Thick-Liquid Form Product

Farmers can apply FIB-SOL products through known methods: Seed Dressing, Soil Drench, Drip Irrigation, Broadcasting, Foliar Spray

Soil Health Across Seasons

Microbes Enhance Soil Quality

Microbes secrete molecules that enable better soil aggregation, nutrient recycling and water retention properties

Microbes degrade soil carbon macromolecules into food for other beneficial soil fauna which help retain soil structure and resist drought conditions

Crop & Stage Specific Formulations

Crop Needs Are Unique

FIB-SOL's Product portfolio offers multiple key crop and crop-stage specific microbial formulations to ensure best yield and quality outcomes for its users

Flexible Manufacturing Services

Agile Manufacturing Capability

One and Only gel-based microbial
formulation manufacturer(Global)

IG4 Technology & Process IP
enables unique Agile manufacturing
capability

MOQ flexibility

Custom microbial compositions
that deliver specific outcomes

Built Deep Vendor relationships to
ensure timely service delivery

Elite Technical Support

Power-packed R&D team

R&D heavy team - 10 members

4 Scientists - 3 PhDs from IIT
Madras & 1 PhD from Madras
University

Strong network with faculty of top
institutions in the country

Consists of Biotechnologists,
Biochemists & Chemists

Our Top Products

Features of Product & Service - Marketing Companies

- IG4 Technology - Flexible Microbial Counts & Composition
- Novel Gel Carrier based formulation
- Industry-leading microbial payload(10^{13} CFU)
- Multi season stability(18 months)
- 100ml SKUs equivalent to 1 litre products(Liquid Biofertilizers)
- Easy integration with farmer practices
- Proven Performance - Reliable Yield & Quality Boost - 10-25% extra yield
- Sold across 1,85,000 acres (FY2025-26) & 6,00,000 acres cumulatively
- Agile Manufacturing Services
- In-house R&D Team lead by IIT Madras PhDs

Benefits of Our Products & Services

- Quickly add Advanced Microbials to portfolio without R&D investments
- Transition Product Portfolio towards 'Sustainability'
- Proven Reliable Product Performance
- Reduced Product Return Risk
- 5x Reduced Logistics Overheads
- 3x Reduced Shelf/Storage Space
- Extract 15-20% premium margins
- Flexible MOQs & Turn-around Time
- Quick Technical Support
